Education

- **Bachelor of Technology in Artificial Intelligence and Machine Learning** *Nov 2020 - 2024*
  Sree Chitra Thirunal College of Engineering, Trivandrum, Kerala CGPA: 6.93
- **BSc. in Data Science and Applications** *May 2021 - Present*
  Indian Institute of Technology, Madras CGPA: 6

Projects

- **Fake Logo Detection | Revese Image Search**
  Implementation of an application to check the authenticity of a logo by the concept of Reverse Image search.
  - Developed a Reverse Image Search–based web application for detecting plagiarized logos, enabling designers and influencers to verify the authenticity and uniqueness of logos.
  - Implemented an image similarity VGG16 model to compare uploaded logos against a dataset and display the top matches with similarity scores.
  - Trained the model on a dataset of above 1 lakh logos from Large Logo Dataset (LLD) and provided the top 5 similar logo suggestions for each query. Built the web application using the Flask and React.
  - **Key Skills: Python, Tensorflow and keras, Scikit-learn, Python imaging library(PIL), Pandas and numpy, Flask, React.**
- **Intrusion Detection System using ML**
  A system to detect intrusions in a network from the Network Traffic data.
  - Developed an Intrusion Detection System using Machine Learning to identify and classify emerging network attacks and threats.
  - Built a network environment in Kali Linux and Simulated different network attacks using Metasploit. Collected the live network traffic data (With and without attack) using Wireshark. Pre-processing, feature extraction and labeling is done on this data and used to train models like Random forest, Gradient boosting and SVM algorithms.
  - Wrapped the best model into a Flask and Tkinter module to Upload the Network traffic csv file and predict the type of attack.
  - **Key Skills: Python, Tensorflow and keras, Pandas and numpy, Virtual box, Metasploit, Wireshark, Tkinter.**
- **Trekking Management Application | Modern Application Development 1 Project**
- **Trekking Management Application - V2 | Modern Application Development 2 Project**

Experience

- **Machine Learning Engineer**
  Tigmaminds Pvt. Ltd., Kazhakuttam, Trivandrum July 2024 – Present
  - Contributed to three major projects: Physician Co-pilot, Billing Codes Generation, and XORAI – AI-Native Integration and Orchestration Platform.
  - **Physician Co-pilot:** Designed and developed the complete Frontend module using React. Wrapped fine-tuned LLMs into lightweight APIs and integrated them with the React frontend for smooth and scalable performance.
  - **Chart segregation** : Worked on API wrapping, optimization and server deployment for large models like YOLO11.
  - **Chart Processing** : Fine-tuned Mistral V2 model for billing code generation, releasing two improved versions with enhanced accuracy and stability.
  - Gained hands-on experience in API optimization, Docker-based LLM deployment, database management, and server-side performance tuning.
  - Collaborated closely with Medical coders and ML developers to build production-ready and scalable ML healthcare solutions.
  - **XORAI — Frontend Development**: Built and maintained the React/TypeScript frontend of an AI-native integration and orchestration platform across features, UI enhancements, and bug fixes.
  - Built reusable component libraries (JSON Editor/Viewer, authentication forms, Smart Input Tag, Expand Editor) that improved UI consistency and reduced code duplication across the platform.
  - Integrated 9+ datasources (Snowflake, Salesforce, AWS S3, SFTP, MySQL, Oracle, MSSQL, MongoDB, PostgreSQL) and authentication flows (OAuth, JWT, HMAC, Basic) with backend APIs, including vault-based credential handling and field-level validation.
  - Built the frontend of the Promotions feature for moving pipelines between environments, owning it end-to-end: review, flow and dependency diff, bulk promotions, external environment handling, and role-based access.
  - Led refactoring of connection and authentication forms and migrated key APIs (Execution Summary, Cache) to a new service, improving scalability and performance.
  - Resolved multiple UI and functional issues through close collaboration with QA.

– Working closely on enhancement of the platform and feature implementation.

- **Artificial Intelligence Intern**
  Corizo EdTech, Bangalore Sep 2021 – Nov 2021

  – Completed a 3-month online internship in Artificial Intelligence, covering topics in Machine Learning and Deep Learning, along with both a Minor and Major project.
  – **Minor Project:** Built a Spotify genre segmentation system using the K-Means clustering algorithm on Spotify data, and performed detailed analysis using various visualization techniques.
  – **Major Project:** Implemented a Cardiovascular Disease Prediction System using patient clinical data; conducted Exploratory Data Analysis (EDA) and trained multiple models including Logistic Regression, SVM, and Random Forest, followed by performance comparison across metrics.

Technical Proficiencies

Programming Languages: Python, JavaScript, SQL

Web Development: React, FastAPI, Flask

Generative AI & LLMs: Fine-tuning (LLaMA 3.1, Mistral, BERT variants), Prompt Engineering, RAG, Vector Databases (Milvus), NLP & Transformers, NER, Text Classification

Machine Learning & Data Science: PyTorch, TensorFlow, Hugging Face Transformers, Scikit-learn, NumPy, Pandas, Matplotlib

Cloud Platforms: Microsoft Azure, Google Colab

Databases: MongoDB, MySQL, Milvus

Development & Collaboration Tools: Git, GitHub, Azure DevOps, Docker

Soft Skills: Teamwork, Leadership, Mentoring, Cross-functional Collaboration, Adaptability, Presentation, Continuous Learning

Achievements & Leadership

- **Foundation Level Certificate in Programming and Data Science — IIT Madras** *May 2023*

  – Completed the Foundation Level of B.Sc. in Data Science and Applications.
  – Currently pursuing the Diploma in Data Science and Diploma in Programming.

- **Execom Head — AIML Students Association SCTCE** *May 2021 – May 2023*

  – Led the program coordination team of the AIML Students Association and organized various workshops, seminars, and technical events.

- **Gpod Manager — Google Developer Students Club (GDSC SCTCE)** *May 2021 – May 2022*

  – Launched and managed a podcast under GDSC SCTCE, overseeing both content creation and team management.

Hackathons

- **Hackout 2023 — IIT Madras** *2023*

  – Presented **PeerPack**, a Flutter-based mobile application that connects travelers as courier partners to enable faster and cost-effective deliveries.
  – Developed the overall Frontend flow in Flutter and showcased the functional prototype during the hackathon.
